INFORMATION

Log4j vulnerability – what everyone needs to know

Information about the critical vulnerability in the logging tool, who it could affect and what steps you can take to reduce your risk.

Log4shell is a critical vulnerability in the widely-used logging tool **Log4j**, which is used by millions of computers worldwide running online services. A wide range of people, including organisations, governments and individuals are likely to be affected by it. Although [fixes have been issued](#), they will still need to be implemented.

GUIDANCE

Dealing with the SolarWinds Orion compromise

Immediate actions for all organisations using the SolarWinds Orion suite of IT management tools

An attacker has been able to add a malicious, unauthorised modification to SolarWinds Orion products which allows them to send administrator-level commands to any affected installation. This modification:

- causes the Orion products to connect to an attacker-controlled server to request instructions
- does **not** rely on the attacker being able to directly connect from the internet to the Orion server
